## Technomed launches advanced solvent dispenser for medical tubing assembly

**ROCKVILLE, MD** - Technomed, a subsidiary of Tecnoideal, and a leader in medical plastic tubing assembly solutions, will unveil the **DS-Vision**, its most advanced solvent dispenser for the bonding of medical tubing, at the MD&M Trade Show in Anaheim, California, on February 11th, 2020.

The DS-Vision is an innovative, well-designed machine that will help medical equipment & devices manufacturers to notably improve their quality control systems, and thus, lower the rate of non-compliant plastic bonded products.

The machine built-in quality control system ensures that operators are following each production step properly through the use of visual and sound cues. In addition, downloadable production metrics will help managers control and evaluate post-production outcomes, and inform future production planning.

“In the past, manufacturers couldn’t quite control the variables of the bonding process. We now have a machine that can provide real-time information to optimize compliance and lower risks,” said Vico Giavotto, the CEO of TechnoMed.

Incredibly easy to use, the DS-Vision's full-color, touchscreen display, provides operators with real-time information regarding their productivity and eliminates the guessing games that have been the norm for solvent dispensing up until now.

The DS-Vision is a testament to TechnoMed and parent company Tecnoideal’s commitment to providing high quality and customer focus solutions that address devices manufacturers’ needs in the healthcare industry.

TechnoMed will be showcasing the DS-Vision during the MD&M Trade Show in Anaheim, California on February 11-13th, 2020.

# ABOUT US

TechnoMed provides machines and services to the medical plastic tubing assembly market. Offerings include customized solutions for the bonding, cutting, leak & pressure testing, and automation of medical plastic tubing operations.

TechnoMed strives to become the market benchmark in assembly solutions for the medical device manufacturers. At TechnoMed,

- every bonding is a commitment
- every automation is a challenge solved
- every cut is a future connection
- every test is a confirmation

All TechnoMed's machines are designed and manufactured at its parent company's facility in Mirandola, Italy.

TechnoMed is based in Rockville, Maryland and serves customer operations in the North and South American regions. We have operations in Maryland, Puerto Rico, Mexico, and Dominican Republic. For more information about TechnoMed, please visit

# DS-VISION

DS-Vision is an easy-to-operate solvent dispenser for cyclohexanone or alternative solvents. It is a great asset to quality control efforts which are critical for the assembly of tubing devices, especially those used in minimally invasive medical procedures.

## Benefits

---

- Confirms presence of solvent on each tube to be assembled
- Gathers production data to generate optimal bonding results
- Dispenses consistent amount of solvent with improved delivery system
- Provides downloadable operating metrics for optimal production control, analysis, and planning
- Increases operator efficiency with real-time, on-screen production indicators

Another great benefit of DS-Vision is in its Safety system. It can be programmed to alert the operator with alarms or complete machine shutdown if preset instructions are not followed.

## Dimensions

---

- Height: 10.55"
- Width 5.88"
